

Food Web Creation

You will show your knowledge of food webs and the interactions that occur within them.

Step #1: Choose 1 of the following ecosystems:

- forest
- jungle
- pond
- ocean
- prairie
- desert

Step #2: Choose organisms that live in your ecosystem that will meet the following requirements:

- 1 energy source (sun)
- 1 producer (green plant)
- At least 2 consumers that are herbivores
- At least 3 consumers that are carnivores
- 1 scavenger or decomposer

Step #3: Create your food web using pictures that you gathered or drew.

- use unlined paper
- remember a title (eg: forest ecosystem)
- remember your arrows - they should point to the organism who is **GETTING** the energy

Step #4: Give your food web labels. Use the labels ENERGY SOURCE, PRODUCER, HERBIVORE, CARNIVORE and SCAVENGER or DECOMPOSER.
